

# TICKET CHECKING STAFF

## VIJAYAWADA DIVISION

**SMART PHONE**

**Technology** has changed the way we work. Take a quick glance around your workplace, store, stockroom, even a building site and you'll see smartphones, computers, hand-held gadgets connected to the internet transferring data to servers all over the globe. For most of us, **technology rules our everyday lives**. We may not even realize it, but we have become ever so dependent on technology all around us. Your smartphone is more potent than first generation supercomputers. **It literally drives our lives, both personal and professional.**

## Working with others has become easier

Mobile phones mean we're constantly in touch and we're constantly available. We can work anywhere and still stay in touch. **Smartphones are like an office in your pocket.** In a lot of ways, technology has helped us work with others easily and efficiently. Technology helps us stay connected without the need to be physically present.

As the nature of the work environment continues to change, new trends have emerged at the individual, team, and organizational levels.

Today, smartphones largely fulfil their users' needs for microphone (smartphones often have one to four microphones), a digital camera (digital cameras), a communications device (smartphones can transmit) online chat, e-mails, telephone calls and video chat through the Internet by Wi-Fi audio recorder (using the microphone), a satellite navigation system and trip planner, weather forecasting, a media player, a clock, news, a calculator, a web browser, a video game player, including raster facsimile data generated directly and digitally from document and image file formats. Internal storage or removable SD card storage, allows for digital storage of software and personal data (including digital photographs and videos).
